1. Welcome

OfficeMitra turns your **exported accounting journals** into clear **CEO, CFO, and Board** views — KPI tiles, charts, red flags, cash forecast, customer/vendor lists, and a downloadable Board PDF.

Important: OfficeMitra runs **on your computer**. Your books are stored in a local file (`data\ssdv_connect.sqlite`). SanMitra does not receive your data unless **you** choose to send an export or screenshot for support.

OfficeMitra — How it works

2. What OfficeMitra does

OfficeMitra **is**

- A **read-only** analytics tool on top of double-entry journals
- A way to see **CEO / CFO / Board** packs without building spreadsheets
- A **local** app — works after install even without internet (except optional AI)
- Compatible with exports from **Tally, Zoho Books, Busy, Excel**, and similar tools (via CSV)

OfficeMitra **is not**

- Tally, Zoho, Busy, or MitraBooks — it does not replace your ERP
- A live login to your accounting software
- Something that **changes** your books or posts vouchers back to your ERP
- A statutory books-of-record replacement

Who uses which screen?

Role	Start here	Why
Owner / CEO	CEO pack	Revenue, margin, cash, collections, what-if ideas

Finance / CA / CFO	CFO pack	DSO, aging, GST, bank, 30/60/90 cash forecast, vendors
Director / Board	Board pack	Red flags, policy scorecard, benchmarks, PDF for meetings
Analyst	Chart pack	Trends and aging charts
First-time setup	Connect	Upload your CSV export

OfficeMitra screens

3. Install on your PC

Quick guide: [CLIENT_INSTALL.md](#)

SanMitra

TRUST • COMPLIANCE • GROWTH

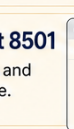

Install OfficeMitra on your PC

1

Unzip SSDV folder

Extract the downloaded SSDV folder to any location on your PC.

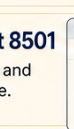

2

Install Python 3.11 if needed

If Python 3.11 is not installed, download and install it from python.org

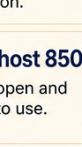

Python 3.11

3

Right-click install.ps1 Run with PowerShell

Right-click the file install.ps1 and select "Run with PowerShell".

4

Double-click Start OfficeMitra

Double-click the Start OfficeMitra file to launch the application.

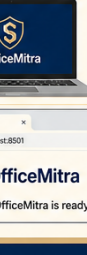

5

Browser opens localhost 8501

Your default browser will open and OfficeMitra will be ready to use.

SanMitra

TRUST • COMPLIANCE • GROWTH

Smarter Tools. Stronger Compliance.
Better Growth.

Install OfficeMitra on your PC

Unzip SSDV folder

2

Install Python 3.11 if needed

2

**Right-click install.ps1
Run with PowerShell**

Right-click the file `install.ps1` and select "Run with PowerShell".

4

Double-click Start OfficeMitra

Double-click the Start OfficeMitra file to launch the application.

5

Browser opens localhost 8501

Your default browser will open and OfficeMitra will be ready to use.

SanMitra
TRUST • COMPLIANCE • GROWTH

Smarter Tools. Stronger Compliance.
Better Growth.

Summary

Windows: download **OfficeMitra-Setup.exe** → Next → Install → double-click **OfficeMitra** on the desktop.

Mac: download **OfficeMitra.dmg** → drag **OfficeMitra** to **Applications** → open it (first time: right-click → **Open**).

4. Daily workflow

Typical month-end cycle

3	Sidebar → Connect → upload CSV + ledger map
4	Set As of to your report date (usually month-end or year-end)
5	Review CEO pack (performance), CFO pack (cash & aging), Board pack (red flags)
6	Download Board pack (PDF) for the meeting
7	Close the browser; close the OfficeMitra status window to stop

Which database (vault) am I using?

Vault file	Meaning
`ssdv_connect.sqlite`	Your company — created when you use Connect
`ssdv.sqlite`	Demo company (ABC Industrial) — for training only

On the installed app these files live under **Windows** %LOCALAPPDATA%\OfficeMitra\data or **Mac** ~/Library/Application Support/OfficeMitra/data.

In the sidebar **Vault** dropdown, pick the file that matches your company.

5. The five screens (packs)

Use the sidebar **Screen** radio buttons.

Screen	What you see
CEO pack	KPI tiles, AI notes, top overdue customers, benchmarks, what-if scenarios, sales vs COGS, profit charts, Ask Why
CFO pack	Cash 30/60/90 forecast, DSO/DIO/DPO/CCC, GST, bank position, AR/AP aging, top customers & vendors
Board pack	Red flags first, balance sheet tiles, policy scorecard, benchmarks, top party tables
Chart pack	Activity, cash movement, margin, P&L mix, monthly profit, aging charts
Connect	Upload journal CSV + ledger map (read-only extract)

Downloads on every pack screen

Button	Output
--------	--------

Download full report (HTML)	Printable CEO-style report — open in Edge, **Ctrl+P** to save as PDF
Download Board pack (PDF)	A4 Board summary — red flags, scorecard, benchmarks, cash forecast, what-if

CEO PACK

Revenue increased 32.2% vs prior YTD.

Gross margin 20.5%. YTD profit (sales - COGS - operating expenses) -3,112,728.93.

Mar-26 profit (sales - COGS - operating expenses) -446,884.17.

Collection efficiency (receipts / sales) 102.0%. DSO 156.

AR 90+ is 60.4% of receivables (33,268,908.23 of 55,045,928.41).

Top Overdue Debtors Ranking

Metro Industrial Supplies has 406,657.13 in AR 90+ (0.9% of AR).

Largest vendor exposure is Precision Insulation Co 4,318,228.68 (6.4% of AP).

Operating working capital (AR + stock - AP) 81,350,342.89.

DSO is 156 days against a 120-day policy.

Cash in 90 days -79,835,831.05 if 0-90 day AR and AP convert. Unscheduled AR 33,268,908.23 is not timed.

SSDV policy breach: DSO, Current ratio, Quick ratio. Peer is ABC trading baseline when that vault exists, not an industry average.

What-If Scenarios (Simulation Levers)

Benchmarks

SSDV policy bands for these trading books. Peer is ABC Industrial generated baseline (data/ssdv.sqlite) when that vault exists. Not a surveyed industry average.

KPI	Actual	SSDV policy	Policy	ABC baseline	vs ABC
Gross margin	20.5%	at least 16.0%	Hold	n/a	No ABC baseline vault
COGS / sales	0.80	under 0.84	Hold	n/a	No ABC baseline vault
DSO	156 d	under 120 days	Breach	n/a	No ABC baseline vault
Collection efficiency	102.0%	at least 80.0%	Hold	n/a	No ABC baseline vault
Current ratio	0.97x	at least 1.00x	Breach	n/a	No ABC baseline vault
Quick ratio	0.33x	at least 1.00x	Breach	n/a	No ABC baseline vault
Inventory / sales	0.31	under 0.45	Hold	n/a	No ABC baseline vault
Top customer share	1.0%	under 35.0%	Hold	n/a	No ABC baseline vault
Cash conversion cycle	304 d	no SSDV day cap	n/a	n/a	No ABC baseline vault

What-if (recommend-only)

Recommend-only. Each scenario scales posted YTD figures or open AR buckets. Books are not changed. No future sales plan beyond the stated lever.

If DSO improves to 120 days, how much cash is released?

If YTD sales rise 15%, what is projected profit?

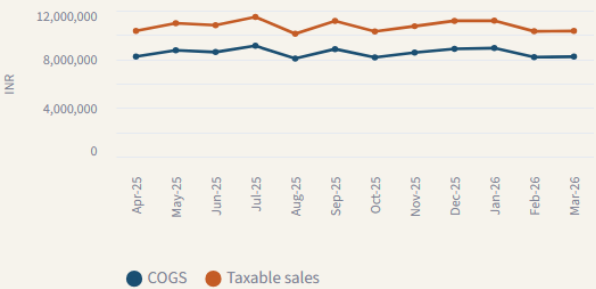

If AR 90+ is collected, how much cash is released?

If collection efficiency reaches 80%, how much extra cash?

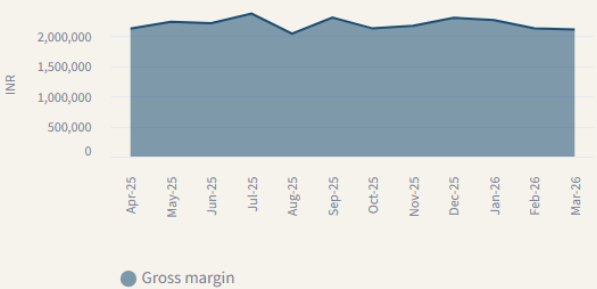

Scenario	Result	Delta INR
If DSO improves to 120 days, how much cash is released?	DSO 156 days vs 120-day policy implies about 12,702,906.56 of AR (55,045,928.41 outstand	12702906.56
If YTD sales rise 15%, what is projected profit?	At the same gross margin and YTD opex (29,478,976.48), YTD profit moves from -3,112,728.	3954937.13
If AR 90+ is collected, how much cash is released?	Collecting open AR 90+ (33,268,908.23 of 55,045,928.41 receivables) releases that cash.	33268908.23
If collection efficiency reaches 80%, how much extra cash?	YTD receipts 131,394,168.09 are already at or above 80% of sales (128,832,774.40).	0.00

OfficeMitra

Your AI CFO Dashboard

Connect your accounts data

Choose where your books come from. OfficeMitra reads data only — it never writes back to Tally, Zoho, Busy, or any other application.

Data source

Any ERP (journal CSV) — Ready

Tally / TallyPrime — Ready

TallyPrime HTTP (live pull) — Ready

Zoho Books — Upload export file

Busy — Upload export file

Read-only. Export a day book / journal register to CSV (voucher_id, date, voucher_type, account, debit, credit) plus a ledger map.

Company name (shown on reports)

Journal / day-book CSV export

Upload

200MB per file • CSV

Ledger map (optional CSV or YAML)

Upload

200MB per file • CSV, YAML, YAML

Upload a file to continue.

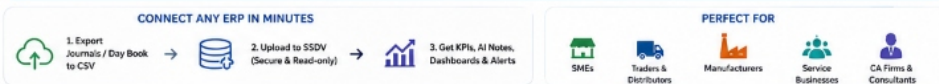

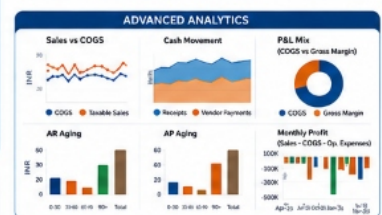

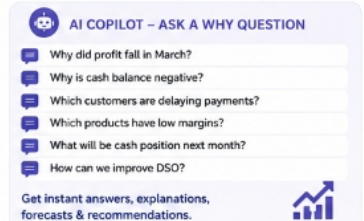

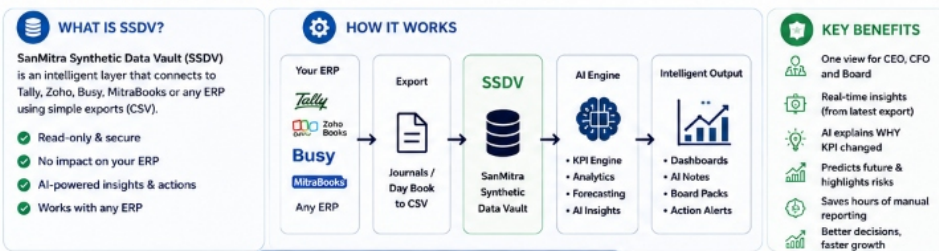

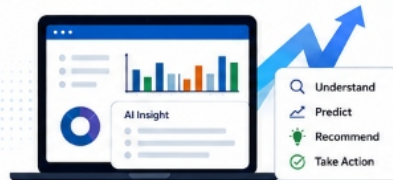

5.6 Executive MIS & AI Copilot Overview

OfficeMitra AI / SSDV

Your AI Business Analyst for SMEs

Read-only KPIs and AI insights from your ERP data.
Not a live login to Tally, Zoho, Busy, or MitraBooks.

Secure. Simple. Intelligent. Actionable.

6. Connect your accounting software

OfficeMitra does **not** log into your ERP. You **export** a CSV and upload it.

Tally (typical path)

- In Tally: **Display** → **Account Books** → **Day Book** (or Journal register).
- Export to **Excel/CSV**.
- Ensure **one row per debit or credit line** (not one row per voucher total).
- Map ledger names using `ledger_map.csv` (see examples folder).

Zoho Books / Busy

- Export **journal** or **day book** report to CSV.
- Same column rules as below.

Required CSV shape (simple view)

Your file should look like this (column names can use common aliases):

```
voucher_id, date, voucher_type, account, debit, credit, party, narration
```

- Each **voucher_id** must **balance** (total debits = total credits).
- **date** format: `YYYY-MM-DD` (example `2025-03-31`).
- **account** = ledger name from your ERP (mapped via ledger map file).

Sample files: examples\generic_ingest\journals.csv and ledger_map.csv.

Ledger map (strongly recommended)

A second small CSV tells OfficeMitra how your ledger names map to account codes:

```
source,account_code
HDFC Bank,111000
Sundry Debtors,120000
Sales Account,410000
```

Without a map, every account name in your export must already be a valid code.

In the Connect screen

1. **Journal CSV** — required
2. **Ledger map** — recommended
3. **Company name** — appears on reports
4. **Replace books** — tick when reloading a full fresh export
5. Click **Extract and post into SSDV**
6. Switch to **CEO pack** and set **As of** date

7. Workflow tips

Tip 1 — Set the correct **As of** date

The dashboard shows figures **as at** the date you pick. If you choose a date **after** your year-end with no transactions in the new year, sales may show **zero** or “revenue decreased 100%”. Use your **actual last voucher date** (for example **31 Mar 2026** for year-end).

Shortcut: click **Use ABC year-end 31 Mar 2026** when viewing the demo vault only.

Tip 2 — CEO Monday, CFO Wednesday, Board Friday

- **Monday:** CEO pack — sales, margin, collections, what-if
- **Mid-week:** CFO pack — cash forecast, aging, GST, top overdue customers
- **Before board meeting:** Board pack + **Download Board pack (PDF)**

Tip 3 — Collection action from CFO pack

Open **CFO pack** → scroll to **Customer & vendor intelligence** → **Top overdue customers**. This list is ranked from **posted** AR aging (recommend-only; OfficeMitra does not send reminders).

Tip 4 — Keep the OfficeMitra window open

While you use the dashboard in the browser, keep the small **OfficeMitra is running** window open. Closing it stops the app.

Tip 5 — Refresh books without reinstalling

New month export → **Connect** → tick **Replace books** → upload → **Extract**. You do not need to run the installer again.

Tip 6 — Print a full-page report

Browser screenshots often cut off content. Instead: **Download full report (HTML)** → open file in Edge → **Ctrl+P** → Save as PDF.

8. Glossary (plain English)

Term	Meaning
AR	Money customers owe you (receivables)
AP	Money you owe vendors (payables)
DSO	Average days to collect from customers — lower is better
DPO	Average days you take to pay vendors
CCC	Cash conversion cycle — how long cash is tied up in operations
Gross margin	Sales minus cost of goods sold, as a %
Collection efficiency	Receipts ÷ sales — are you collecting what you bill?
AR 90+	Receivables overdue more than 90 days
Red flag	Board-level exception (policy breach, negative cash, etc.)
What-if	Recommendation only — “if DSO improved...” — books are not changed
Vault	The SQLite file holding posted journals for one book

More detail: [USER MANUAL.md](#) section 9.

9. Common errors and fixes

What you see	What to do
--------------	------------

Windows SmartScreen	**More info** → **Run anyway** (file is from SanMitra)
Mac “unidentified developer”	Right-click **OfficeMitra** → **Open** (once)
Browser does not open	Manually open **http://localhost:8501**
Blank page / cannot connect	Check the OfficeMitra status window is still open; quit and launch again
Wrong company numbers	Sidebar **Vault** — pick <code>`ssdv_connect.sqlite`</code> for your data, not demo <code>`ssdv.sqlite`</code>
Sales zero / revenue down 100%	**As of** date is wrong — use last date in your CSV
Unmapped ledger	Add that ledger name to your **ledger map** CSV
Unbalanced voucher	One voucher_id has debits ≠ credits — fix in export or source ERP
Connect vault already has data	Tick **Replace books**
Ask Why does nothing	Ollama is optional — install separately; KPI packs work without it
Edge screenshot cuts off page	Use **Download full report (HTML)** or **Board pack (PDF)**

Still stuck? Email contact@sanmitratech.in with screenshots.

10. FAQs

Do I need internet after install?

No, for normal KPI packs and Connect. Internet is needed only to download the installer the first time, and for optional Ollama (Ask Why).

Does SanMitra see my books?

No, unless you email files or screenshots to support. Everything runs locally on your PC.

Can I install on multiple PCs?

Yes. Install on each PC separately. Copy `ssdv_connect.sqlite` from the data folder (see [CLIENT_INSTALL.md](#)) to move books between machines.

Does it work with Tally Prime?

Yes, via CSV export + Connect. Native live Tally API is not required.

Will it change my Tally / Zoho data?

Never. SSDV is read-only. It only reads the CSV you upload.

Can my CA use the same install?

Yes. Share the vault file or sit together on one PC. Many CAs use **CFO pack** and **Board PDF**.

What file should I back up?

ssdv_connect.sqlite in the OfficeMitra data folder (Windows: %LOCALAPPDATA%\OfficeMitra\data, Mac: ~/Library/Application Support/OfficeMitra/data).

Is there a Mac version?

Yes. Download **OfficeMitra.dmg**, drag the app to Applications, then open it. First launch on an unsigned build: right-click → **Open**. See [CLIENT_INSTALL.md](#).

What is the demo ABC company?

data\ssdv.sqlite is a generated training company (ABC Industrial Supplies). Use it to explore features before loading your own CSV.

What-if scenarios — are they real forecasts?

They are **recommend-only** calculations from **posted** facts (for example “if DSO were 120 days...”). They do not change journals and are not a substitute for a full budget model.

Industry benchmarks?

OfficeMitra compares to **SSDV policy bands** and an optional **ABC baseline** demo peer — not a national industry survey.

11. Optional: Ask Why (AI)

Ask Why (CEO pack chips and typed questions) uses **local Ollama** with a language model. It is **optional** — all KPIs, charts, PDFs, and party lists work without AI.

To enable:

- 1. Install [Ollama](#) on the same PC.
- 2. Run model: `llama3.1:8b` (requires sufficient RAM).
- 3. Use chips like “Why did profit fall?” on the CEO pack.

The AI may only use numbers from your posted books — it must not invent customers or causes.

12. Backup and safety

Do	Don't
Back up `data\*.sqlite` regularly	Run `init --force` on a vault unless SanMitra/CA tells you to

Keep exports (CSV) in a dated folder	Paste PowerShell output back as commands
Use Replace books for full reloads	Share vault files over unsecured channels without consent
Contact support before reinstalling if unsure	Install SSDV into global Python (breaks other tools)

13. Support

SanMitra Technologies

Channel	Details
Email	contact@sanmitratech.in
Website	https://www.sanmitratech.in

When contacting support, please send

1. Your **company name** (as entered in Connect)
2. **Windows version** (Settings → System → About)
3. **What you tried** (install, Connect, which screen)
4. **Screenshot** of the error or sidebar (vault + as-of date visible)
5. Whether you use **Tally / Zoho / Busy / Excel**

We typically respond with step-by-step guidance for install, CSV mapping, and dashboard use.
