

SanMitra

Tech Solutions

SanMitra Synthetic Data Vault (SSDV) is a **journal-first** tool. It either **generates** internally consistent Indian trading-company books, or **reads** journals exported from another application, then shows **CEO / CFO / Board KPIs**, charts, and AI notes.

Client install (non-technical): [CLIENT_INSTALL.md](#) · Client manual (FAQs, support): [CLIENT_MANUAL.md](#) · Support: contact@sanmitratech.in · sanmitratech.in

GitHub (private): <https://github.com/jayamurli1954/SSDV>

1. What SSDV is and is not

SSDV is

- A double-entry vault. Every voucher is posted through ``post()``. Debit must equal credit or the voucher is rejected.
- A **read-only connector**. It copies journals **into** SSDV. It never writes back to Tally, Zoho, Busy, or MitraBooks.
- An OfficeMitra MIS screen (Streamlit) plus a PowerShell CLI.

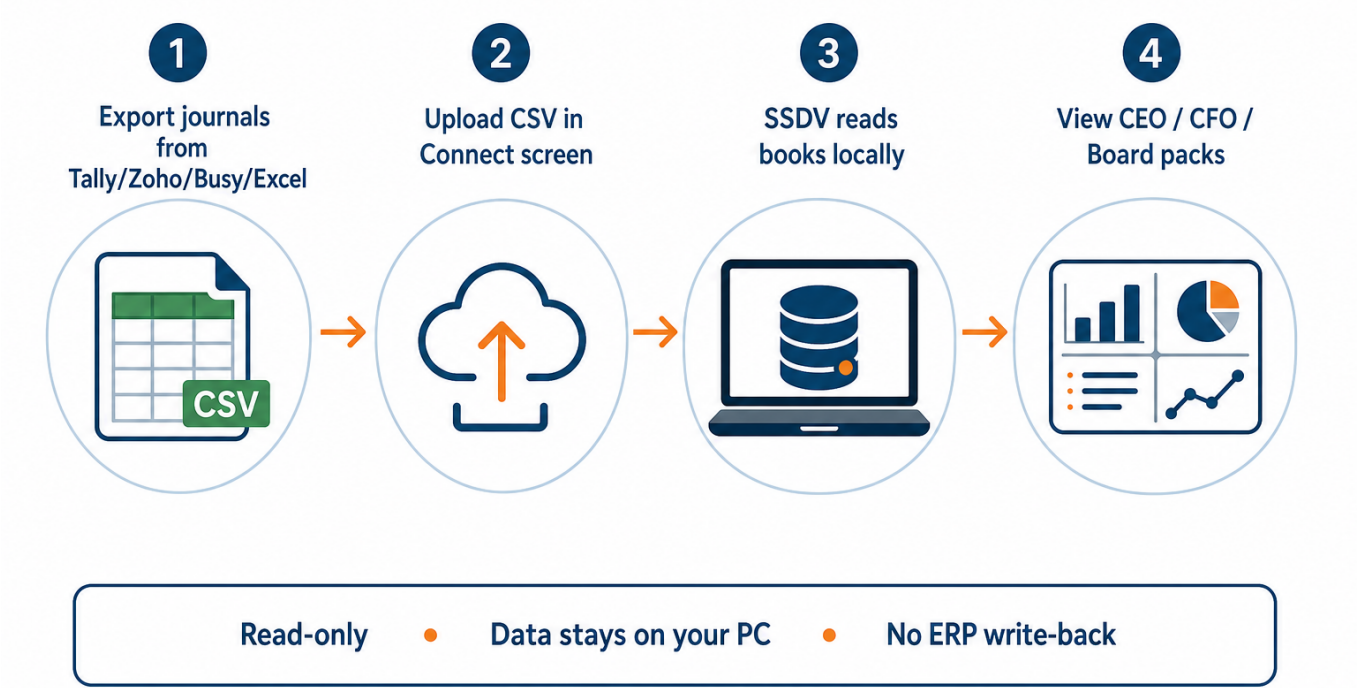

SSDV is not

- MitraBooks ERP, Tally, or a live login to any accounting product.
- A replacement for statutory books of record.
- Something you install into **global** Python (that broke ``sanmitra_unified-Next`` preflight once, because of a pytest version clash).

Two kinds of data:

Fuel	What it is	Typical vault	Typical as-of date
Generated books	ABC Industrial Supplies Pvt Ltd, FY 2023-24 to 2025-26	<code>`data\ssdv.sqlite`</code>	**2026-03-31**
Connected books	Your CSV day book / journal register	<code>`data\ssdv_connect.sqlite`</code>	Last date in that CSV (sample: **2024-04-30**)

OfficeMitra — How it works

2. Install (once, PowerShell)

SanMitra
TRUST · COMPLIANCE · GROWTH

Install OfficeMitra on your PC

- ✓

1

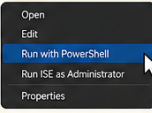

Unzip SSDV folder
 Extract the downloaded SSDV folder to any location on your PC.
 
- ✓

2

Install Python 3.11 if needed
 If Python 3.11 is not installed, download and install it from python.org

Python 3.11
- ✓

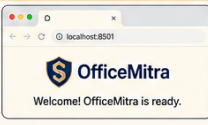

3

Right-click install.ps1
Run with PowerShell
 Right-click the file install.ps1 and select "Run with PowerShell".
 

- ✓

4

Double-click Start OfficeMitra
 Double-click the Start OfficeMitra file to launch the application.
 
- ✓

5

Browser opens localhost 8501
 Your default browser will open and OfficeMitra will be ready to use.
 

SanMitra
TRUST · COMPLIANCE · GROWTH

Smarter Tools. Stronger Compliance.
 Better Growth.

Use **only** the project virtual environment.

```
cd D:\SSDV
python -m venv .venv
.\.venv\Scripts\python.exe -m pip install -U pip
.\.venv\Scripts\python.exe -m pip install -e ".[dev]"
.\.venv\Scripts\python.exe -m pip install -e ".[ui]"
```

Do **not** run `pip install -e ".[ui]"` against `C:\Users\...\Python311\python.exe`.

2.1 Always call the venv `ssdv`

On this PC, typing `ssdv` often runs **global** Python, which has **no Streamlit**.

Use this instead, every time:

```
cd D:\SSDV
.\.venv\Scripts\ssdv.exe --help
```

Optional: activate the venv so `ssdv` in that window is the venv one:

```
cd D:\SSDV
.\.venv\Scripts\Activate.ps1
ssdv --help
```

If Activate is blocked, keep using `.\.venv\Scripts\ssdv.exe`.

2.2 Do not paste command *output* back into PowerShell

After `ssdv connect`, the tool prints lines like `Vouchers 7, Next: ssdv ...`. Those are messages, not commands. Only type lines you intend to run.

3. Fast start — ABC Industrial on screen

Generate (only if you do not already have `data\ssdv.sqlite`; **do not add `--force` unless you want to wipe the vault**):

```
cd D:\SSDV
.\.venv\Scripts\ssdv.exe init
.\.venv\Scripts\ssdv.exe validate --as-of 2026-03-31
```

Open the browser dashboard:

```
.\.venv\Scripts\ssdv.exe --db data/ssdv.sqlite ui --as-of 2026-03-31
```

Leave that window open. Open <http://localhost:8501> if the browser does not appear.

In the sidebar:

1. **Vault** → `D:\SSDV\data\ssdv.sqlite` (not `ssdv_connect.sqlite`).
2. Click **Use ABC year-end 31 Mar 2026**.
3. **Screen** → **CEO** (then CFO, Board, Charts as needed).

Stop the UI with **Ctrl+C** in that PowerShell window.

4. Fast start — sample connected books

This does **not** touch ABC Industrial.

```
cd D:\SSDV
.\.venv\Scripts\ssdv.exe connect --source generic --journals examples/generic_ingest/journals.csv --map exa
.\.venv\Scripts\ssdv.exe --db data/ssdv_connect.sqlite ui --as-of 2024-04-30
```

Sidebar: vault `ssdv_connect.sqlite`, as of **2024-04-30**, screen **CEO**.

5. Streamlit screens

OfficeMitra screens

Screen	What you see
All client books	CA Pack roster when two or more vaults are posted: revenue, AR 90+, cash, quality score, reviewed. Click through to one book. Hidden if the license `company_limit` is reached.
CEO	14 KPI tiles, **top overdue customers**, benchmarks vs SSDV policy, **what-if scenarios (recommend-only)**, sales vs COGS, gross margin, collections, P&L mix, monthly profit, why-notes, why chips, optional typed question
CFO	Cash forecast 30/60/90 from open AR/AP (no sales plan), GST input/output/net, bank position, aging 0-30 through 120+, **top overdue customers and top vendor exposure**, DSO / DIO / DPO / CCC
Board	Red flags first, then assets / liabilities / equity, working-capital parts, policy scorecard, **benchmarks vs SSDV policy and ABC trading baseline** (not an industry survey), cash-cycle days, **top overdue / vendor tables**
Charts	Activity, sales vs COGS, cash movement, margin, P&L mix, monthly profit, aging
Connect	Upload a journal CSV + optional ledger map (read-only extract)

Every pack screen shows **Quality** (0–100) and **Reviewed / Not reviewed**. Downloads:

Button	Output
Download full report (HTML)	CEO screen; open in Edge and **Ctrl+P** for a print
Download Board pack (PDF)	A4 pack (red flags, Board tiles, scorecard, benchmarks, 30/60/90 cash, what-if, top overdue / vendors). Meta line includes quality and reviewed. Journals are not changed.
Download Excel	Always available. Extra sheets: Budget vs actual, Data quality.
Download Board PPT	Unlocked only when quality is ≥ 70 and books are marked reviewed for this as-of. Otherwise a caption explains the block.

All numbers come from **posted journals**. Unbalanced books never get a chart.

5.1 CEO Pack Dashboard

The **CEO Pack** provides executive visibility into overall business health, revenue momentum, liquidity, and operational levers:

Executive KPI Tiles & Performance Ribbon

14 primary KPI scorecards tracking revenue, gross profit, cash position, working capital, inventory, and collection efficiency.

What-If Scenarios & Recommendation Levers

Interactive simulation cards demonstrating potential cash and profit gains from operational improvements (e.g. reducing DSO to 120 days, 15% sales increase).

Benchmarks

SSDV policy bands for these trading books. Peer is ABC Industrial generated baseline (data/ssdv.sqlite) when that vault exists. Not a surveyed industry average.

KPI	Actual	SSDV policy	Policy	ABC baseline	vs ABC
Gross margin	20.5%	at least 16.0%	Hold	n/a	No ABC baseline vault
COGS / sales	0.80	under 0.84	Hold	n/a	No ABC baseline vault
DSO	156 d	under 120 days	Breach	n/a	No ABC baseline vault
Collection efficiency	102.0%	at least 80.0%	Hold	n/a	No ABC baseline vault
Current ratio	0.97x	at least 1.00x	Breach	n/a	No ABC baseline vault
Quick ratio	0.33x	at least 1.00x	Breach	n/a	No ABC baseline vault
Inventory / sales	0.31	under 0.45	Hold	n/a	No ABC baseline vault
Top customer share	1.0%	under 35.0%	Hold	n/a	No ABC baseline vault
Cash conversion cycle	304 d	no SSDV day cap	n/a	n/a	No ABC baseline vault

What-if (recommend-only)

Recommend-only. Each scenario scales posted YTD figures or open AR buckets. Books are not changed. No future sales plan beyond the stated lever.

If DSO improves to 120 days, how much cash is released?

If YTD sales rise 15%, what is projected profit?

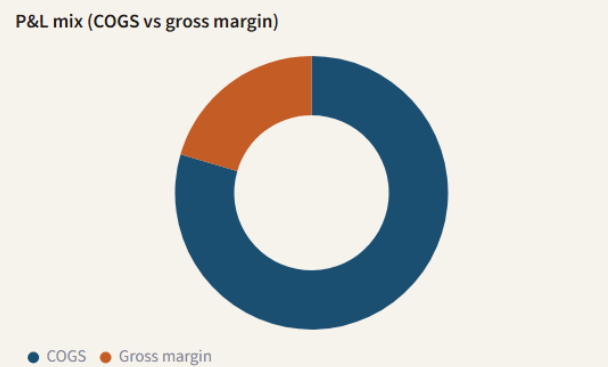

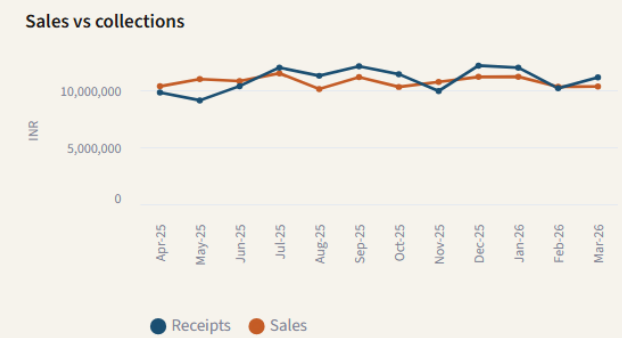

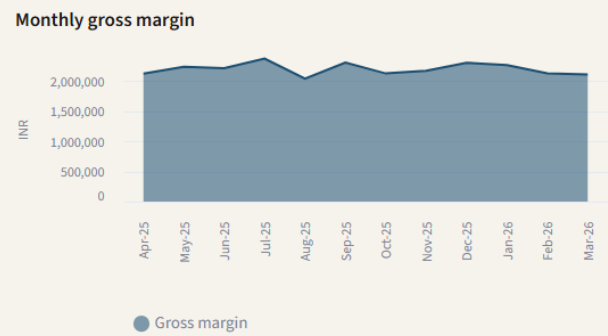

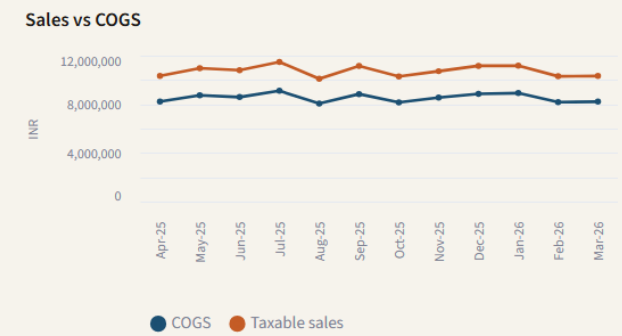

If AR 90+ is collected, how much cash is released?

If collection efficiency reaches 80%, how much extra cash?

Scenario	Result	Delta INR
If DSO improves to 120 days, how much cash is released?	DSO 156 days vs 120-day policy implies about 12,702,906.56 of AR (55,045,928.41 outstand	12702906.56
If YTD sales rise 15%, what is projected profit?	At the same gross margin and YTD opex (29,478,976.48), YTD profit moves from -3,112,728.	3954937.13
If AR 90+ is collected, how much cash is released?	Collecting open AR 90+ (33,268,908.23 of 55,045,928.41 receivables) releases that cash.	33268908.23
If collection efficiency reaches 80%, how much extra cash?	YTD receipts 131,394,168.09 are already at or above 80% of sales (128,832,774.40).	0.00

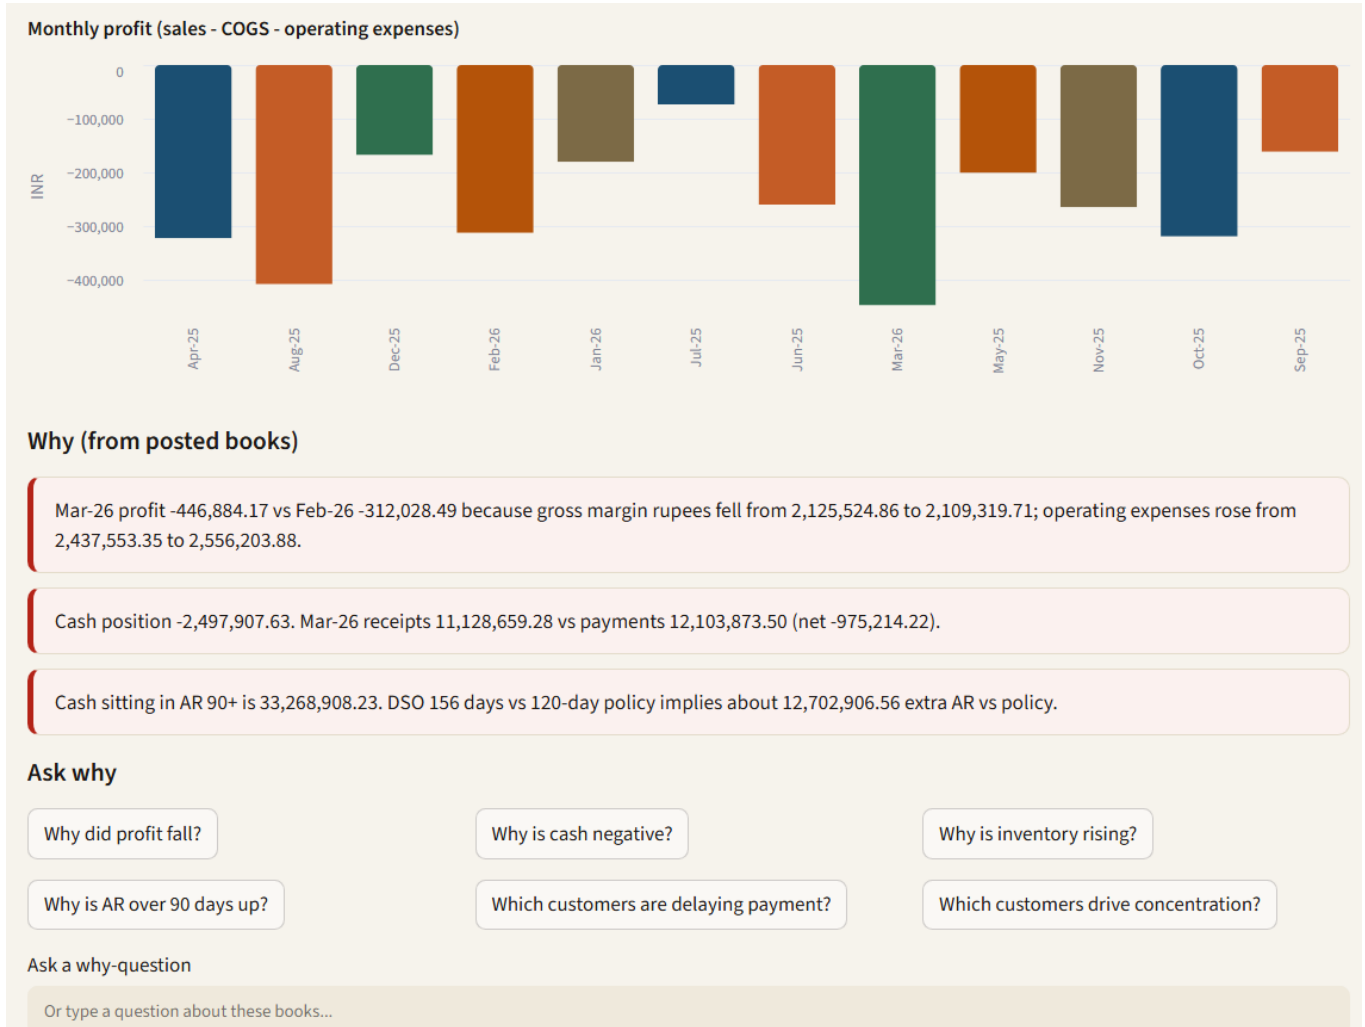

Sales, Margin & Cash Movement Charts

Trend charts showing monthly sales vs. COGS, gross margin stability, receipts vs. vendor payments, and P&L cost mix.

Plain-English AI Why-Notes & Copilot Queries

Change data source

Change data source

Unbalanced books never get a chart. Same facts as `ssdv mis --json`.

Full-page screenshot

OM OfficeMitra

Your AI CFO Dashboard

Connect your accounts data

Choose where your books come from. OfficeMitra reads data only — it never writes back to Tally, Zoho, Busy, or any other application.

Data source ⓘ

Any ERP (journal CSV) — Ready

Tally / TallyPrime — Ready

TallyPrime HTTP (live pull) — Ready

Zoho Books — Upload export file

Busy — Upload export file

Read-only. Export a day book / journal register to CSV (voucher_id, date, voucher_type, account, debit, credit) plus a ledger map.

Company name (shown on reports)

Journal / day-book CSV export ⓘ

Upload200MB per file • CSV

Ledger map (optional CSV or YAML) ⓘ

Upload200MB per file • CSV, YAML, YAML

Upload a file to continue.

5.6 Executive MIS Architecture & AI Copilot Overview

OfficeMitra / SSDV

Read-only MIS & insights for SMEs and CAs

Read-only KPIs and insights from journal / day-book exports.

Not a live login to Tally, Zoho, Busy, or MitraBooks.

Data stays on your PC.

- Understand
- Forecast
- Recommend
- Review

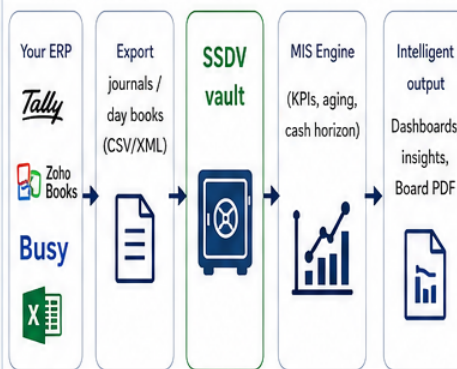

- 100% Read-Only
- Data on your PC
- Recommend-only
- Optional Ask Why

WHAT IS SSDV?

SamMitra Synthetic Data Vault (SSDV) — local journal vault behind OfficeMitra

- Read-only & secure
- Runs on your PC
- CEO / CFO / Board packs
- Works with Tally, Zoho, Busy, Excel journal exports

HOW IT WORKS

INSIGHTS THAT MATTER (SAMPLE)

- Revenue grew 31.8% vs prior YTD.
- Gross margin 20.3%. YTD profit after expenses ₹3,016,732.
- Mar-26 profit is -₹484,902.
- Collection efficiency 101.8%. DSO 154 days vs policy 120 days.
- AR 90+ is ₹6.11 Cr (54.6% of receivables).
- Operating working capital ₹33,379,972 (of ₹54,608,186).

KEY BENEFITS

- One view for CEO, CFO and Board
- Insights explain why KPIs moved (from posted books)
- 30/60/90 cash horizon from open AR/AP
- Board PDF & Excel export
- What-if is recommend-only — books never changed

ASK WHY (OPTIONAL — LOCAL OLLAMA ON YOUR PC)

- Why did profit fall in March?
- Which customers are delaying?
- What does 30/60/90 cash look like?
- How does DSO compare to policy?

KPI packs work without AI.

POWERFUL DASHBOARDS FOR EVERY ROLE

CEO

Growth, profitability, cash, risk at a glance. Board-ready view.

CFO

Trends, KPIs, working capital, cash horizon. Drill to details.

BOARD

Simple, clear, visual summary with recommendations.

ADVANCED ANALYTICS

- Trend & variance analysis
- Segment, customer & product insights
- Aging, cash conversion & DSO/DPH/DPO
- Scenario & what-if (recommend-only)
- Board PDF & Excel exports

100% READ-ONLY. YOUR DATA. YOUR PC.

No live logins. No changes to books.
Pure insights. Smarter decisions.

5.7 Quality score, review lock, budget, Excel, Board PPT

OfficeMitra computes a **data quality score** from the same `validate` gates used on the CLI (trial balance, accounting equation, and the other v1 checks). It is not an LLM score.

Band	Score	Meaning
high	90–100	Gates hold
medium	70–89	Usable; PPT can unlock after review
low	0–69	PPT stays blocked

Deductions (imported client vaults):

- Integrity gate fail (TB / equation): ****–50****
- Other gate fail: ****–8**** each
- No sales budget sidecar next to an imported vault: ****–12****

Generated ABC books do not take the missing-budget deduction (they already have a company plan).

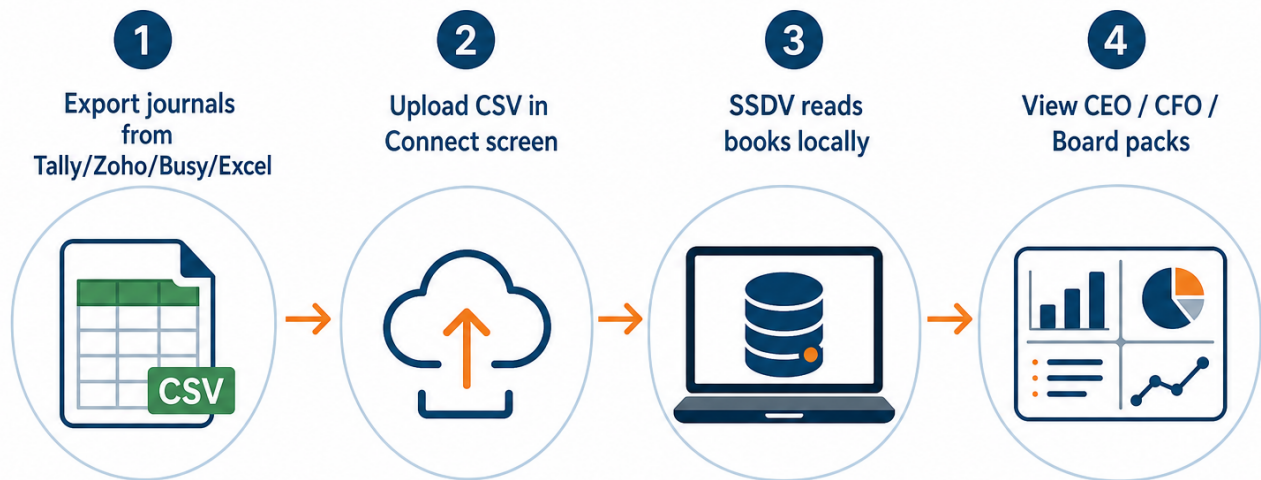

Mark books reviewed for this as-of writes `data\review.json`. Review is valid only for that **as-of date** and **voucher count**. Reload journals or change as-of and you must review again.

Board PPT needs **score** ≥ 70 and a current review. Excel and PDF are not gated.

Optional sales budget: save `data\budget.yaml` next to the SQLite file (section 7.4). The pack then shows sales vs budget. Sample: `examples\generic_ingest\budget.yaml`.

6. Connect another application (read-only)

OfficeMitra — How it works

Read-only • Data stays on your PC • No ERP write-back

SSDV does **not** log into Zoho / Busy / MitraBooks. TallyPrime can be pulled live over HTTP, or you can export XML. Other apps **export** a journal / day book to CSV, map ledger names to SSDV account codes, then SSDV posts into a **sidecar** vault.

```
Any app --export CSV--> journals.csv + ledger_map.csv
--ssdv connect --name "Client"--> data\ssdv_<client>.sqlite
--ssdv firm / ui--> roster, then KPIs
```

6.1 Which sources are ready

```
.\.venv\Scripts\ssdv.exe connect --list
```

id	Status today	What you do
`generic`	**ready**	CSV journals + map.
`tally`	**ready**	TallyPrime DayBook **XML** (<code>--source tally</code>).
`tally-http`	**ready**	Live pull from TallyPrime on port 9000.
`zoho`	export CSV	Export journals from Zoho Books (same CSV as generic).

`busy`	export CSV	Export vouchers from Busy (same CSV as generic).
`mitrabooks`	export CSV	Export journals from MitraBooks (same CSV as generic).

6.2 Upload in the browser

1. Start the UI (any vault is fine).
2. Sidebar **Screen** → **Connect**.
3. **Journal CSV or Tally XML** — required. CSV shape: section 7.
4. **Ledger map** — recommended (CSV or YAML). Shape: section 7.
5. **Company name** — appears on packs and names the client vault (ssdv_.sqlite).
6. Confirm overwrite if that client vault already has data.
7. **Extract and post into SSDV**.
8. With two or more client vaults, open **All client books**, then open one book for CEO / CFO / Board.

SSDV writes a **separate SQLite vault per named company**. It does not change `ssdv.sqlite` unless you pass `--db` to that file.

6.3 Connect from PowerShell

```
cd D:\SSDV
.\.venv\Scripts\ssdv.exe connect --source generic --journals C:\Exports\journals.csv --map C:\Exports\ledger.csv --db data/ssdv_your-company-pvt-ltd.sqlite validate --as-of 2025-03-31
.\.venv\Scripts\ssdv.exe --db data/ssdv_your-company-pvt-ltd.sqlite mis --as-of 2025-03-31 --pack ceo
.\.venv\Scripts\ssdv.exe firm --as-of 2025-03-31
.\.venv\Scripts\ssdv.exe --db data/ssdv_your-company-pvt-ltd.sqlite ui --as-of 2025-03-31
```

Change `--as-of` to the last voucher date in *your* CSV.

`--force` wipes **that** client vault and reloads. Without `--force`, a vault that already has vouchers is refused.

`ssdv ingest` is the same pipeline but writes `data\ssdv_ingest.sqlite` (older name). Prefer `ssdv connect`.

6.4 Tally / Zoho / Busy / MitraBooks in practice

TallyPrime XML and **TallyPrime HTTP** are wired. For Zoho, Busy, and MitraBooks, export a **journal register / day book** with one **row per debit or credit line** (not one row per voucher).

Typical Tally path if you are not using live HTTP: Display → Account Books → Day Book → export XML, then `--source tally`. Or export CSV and use `--source generic`.

```
.\.venv\Scripts\ssdv.exe connect --source tally --journals .\daybook.xml --name "Your Tally Company" --force
.\.venv\Scripts\ssdv.exe connect --source zoho --journals .\zoho_journals.csv --map .\ledger_map.csv --name
```

Imported books have **no planted SSDV cause**. OfficeMitra may only explain numbers that are in the posted ledger.

7. File formats

Sample files: `examples\generic_ingest\journals.csv` and `examples\generic_ingest\ledger_map.csv`.

7.1 Journal CSV (required)

One row = one debit **or** one credit line. Lines that share the same `voucher_id` must **balance**.

Preferred columns

`voucher_id`, `date`, `voucher_type`, `account`, `debit`, `credit`, `party_type`, `party`, `narration`

Column	Required	Notes
<code>`voucher_id`</code>	yes	Same id on every line of one voucher. Aliases: <code>`voucher`</code> , <code>`id`</code> , <code>`vch_id`</code> .
<code>`date`</code>	yes	<code>`YYYY-MM-DD`</code> . Aliases: <code>`voucher_date`</code> , <code>`vch_date`</code> .
<code>`voucher_type`</code>	yes	See table below. Aliases: <code>`type`</code> , <code>`vch_type`</code> .
<code>`account`</code>	yes	Ledger name **or** SSDV account code. Aliases: <code>`ledger`</code> , <code>`ledger_name`</code> , <code>`account_code`</code> .
<code>`debit`</code>	yes	Amount or 0. Aliases: <code>`dr`</code> , <code>`debit_amount`</code> . Commas allowed.
<code>`credit`</code>	yes	Amount or 0. Aliases: <code>`cr`</code> , <code>`credit_amount`</code> .
<code>`party_type`</code>	no	<code>`customer`</code> or <code>`vendor`</code> on AR/AP lines.
<code>`party`</code>	no	Party code/name. Aliases: <code>`party_code`</code> , <code>`party_name`</code> .
<code>`narration`</code>	no	Aliases: <code>`voucher_narration`</code> .

Voucher types (aliases in brackets)

OPENING, PURCHASE (purchases), SALE (sales), RECEIPT (receipts), PAYMENT (payments), EXPENSE (expenses), JOURNAL, CONTRA, CREDIT_NOTE, DEBIT_NOTE, DEPRECIATION, CLOSING, GST_PAYMENT (gst).

Example (two-line opening)

```

voucher_id,date,voucher_type,account,debit,credit,party_type,party,narration
OPEN-1,2024-04-01,OPENING,HDFC Bank,500000.00,0,, ,Opening
```

```
OPEN-1,2024-04-01,OPENING,Capital Account,0,500000.00,,,Opening
```

Rejected if:

- a voucher does not balance
- a ledger name is not in the map and is not a known account code
- the file path does not exist

7.2 Ledger map (strongly recommended)

CSV columns: `source,account_code`

`source` is the name as it appears in the journal CSV. `account_code` is an SSDV code from the chart of accounts.

```
source,account_code
HDFC Bank,111000
Sundry Debtors,120000
Sales Account,410000
Rent,620000
Capital Account,310000
```

YAML is also accepted (`ledger: code`). If you omit the map, every account value must already be a postable SSDV code (for example 111000).

7.3 Chart of accounts (map targets)

Headers (100000 Assets, 200000 Liabilities, ...) are **not** postable.

Code	Name
110000	Cash
111000	HDFC Bank Current
112000	ICICI Bank Current
113000	HDFC Bank OD
120000	Sundry Debtors
130000	Inventory
141000 / 141100 / 141200	Input CGST / SGST / IGST
151000	TDS Receivable
152000	Prepaid Expenses
161000 / 161100	Furniture / Accum. dep. furniture
162000 / 162100	Computers / Accum. dep. computers

210000	Sundry Creditors
221000 / 221100 / 221200	Output CGST / SGST / IGST
222000	GST Payable
231000	TDS Payable
232000	Salary Payable
233000	Expenses Payable
241000	Term Loan
310000	Share Capital
320000	Reserves & Surplus
330000	Profit & Loss Account
410000	Sales
410100	Sales Returns
420000 / 421000 / 422000	Other income / Interest / Discount received
510000	Cost of Goods Sold
520000 / 521000	Freight inward / Purchase returns
610000	Salaries
620000	Rent
621000–631000	Other operating expenses (electricity, insurance, bad debts, ...)
640000 / 641000 / 642000	Bank charges / Interest term loan / Interest OD
650000	Depreciation
660000	GST late fee

Full list: `src/ssdv/data/coa.yaml`.

7.4 Sales budget sidecar (optional)

For an imported vault, save a YAML file **next to** the SQLite file, named `.budget.yaml` (`.yml` is also accepted).

Example for `data/ssdv_sample-traders-pvt-ltd.sqlite`:

```
# data/ssdv_sample-traders-pvt-ltd.budget.yaml
sales: 180000
```

Or per financial year:

```
fy:
  FY2024-25: 180000
  FY2025-26: 210000
```

Keys accepted: sales, revenue, or fy: map. Without this file, imported books lose 12 quality points and the pack caption asks you to add it. Generated ABC books use the company plan instead.

Sample: `examples\generic_ingest\budget.yaml`. Copy it beside the client vault and rename to match the stem.

8. PowerShell CLI reference

Global flag (before the subcommand):

```
.\.env\Scripts\ssdv.exe --db PATH\file.sqlite <command> ...
```

If you omit `--db`, generator commands use `data\ssdv.sqlite`. connect with no `--db` uses `data\ssdv_connect.sqlite`. ingest with no `--db` uses `data\ssdv_ingest.sqlite`.

`--scenario NAME` on generator commands writes `data\ssdv_NAME.sqlite` and does not overwrite the baseline vault.

8.1 Generate ABC books

```
.\.env\Scripts\ssdv.exe init
.\.env\Scripts\ssdv.exe purchases
.\.env\Scripts\ssdv.exe sales
.\.env\Scripts\ssdv.exe settle
.\.env\Scripts\ssdv.exe books
```

`init` already runs purchases, sales, settlements, and period books. The extra commands are additive if you run them later.

Danger: `init --force` **drops all tables** in that database. Do not use `--force` on the baseline vault unless you intend to rebuild ABC from scratch.

8.2 Check the books

```
.\.env\Scripts\ssdv.exe validate --as-of 2026-03-31
.\.env\Scripts\ssdv.exe tb --as-of 2026-03-31
.\.env\Scripts\ssdv.exe equation --as-of 2026-03-31
.\.env\Scripts\ssdv.exe aging --as-of 2026-03-31
.\.env\Scripts\ssdv.exe ledger 130000 --as-of 2026-03-31
```

`validate` also prints a **QUALITY** line: score, band (high / medium / low), whether books are reviewed, and whether Board PPT is allowed.

8.3 KPIs and dashboard without the browser

```
.\.venv\Scripts\ssdv.exe mis --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe mis --pack ceo --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe mis --pack cfo --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe mis --pack board --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe mis --pack ceo --json --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe dashboard --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe dashboard --pdf --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe dashboard --pdf --excel --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe dashboard --ppt --as-of 2026-03-31
```

dashboard writes data\mis.html. Open that file in a browser.

dashboard --pdf writes data\board-pack.pdf (Board pack from posted journals).

dashboard --excel writes a sibling .xlsx (Budget vs actual + Data quality sheets). --excel is not gated.

dashboard --ppt writes a sibling .pptx only when quality is ≥ 70 **and** books are reviewed for that as-of. If blocked, the CLI prints PPT blocked: ... and exits with code 2.

--json is the contract for any other UI: tiles, monthly series, aging, insights, plus data_quality_score, reviewed, ppt_allowed, and budget_vs_actual.

8.4 Scenarios (known-cause seeds for OfficeMitra)

These are **separate** databases. They do not change ssdv.sqlite.

```
.\.venv\Scripts\ssdv.exe scenarios
.\.venv\Scripts\ssdv.exe init --scenario customer_concentration
.\.venv\Scripts\ssdv.exe explain --scenario customer_concentration --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe --db data/ssdv_customer_concentration.sqlite ui --as-of 2026-03-31
```

Scenario	Known cause
`baseline`	Healthy growth
`customer_concentration`	Top customer about 40% of revenue
`cash_flow_crisis`	Sales up, DSO up, cash down
`inventory_buildup`	Inventory up, sales flat
`vendor_dependency`	One vendor dominates purchases
`margin_erosion`	Purchase cost up, selling price lags

On **imported** books, ignore planted causes. Explain only the measured KPIs.

8.5 Ask (local Ollama)

Start the **Ollama** app first so it listens on http://127.0.0.1:11434. Default model: llama3.1:8b.

```

.\.venv\Scripts\ssdv.exe ask "why is AR over 90 days up" --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe mis --pack ceo --ask --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe dashboard --as-of 2026-03-31 --ask

```

The model may use only the MIS JSON (posted facts). It must not invent a cause that is not in the books.

In Streamlit, CEO why chips (why did profit fall?, why is cash negative?, why is inventory rising?, why is AR over 90 days up?, Which customers drive concentration?) call the same harness. A typed question still works. The chips and notes use posted journals only; they do not invent a customer or a cause.

8.6 Firm roster and review lock

```

.\.venv\Scripts\ssdv.exe firm --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe firm --as-of 2026-03-31 --json
.\.venv\Scripts\ssdv.exe --db data/ssdv_sample-traders-pvt-ltd.sqlite review --as-of 2024-04-30
.\.venv\Scripts\ssdv.exe --db data/ssdv_sample-traders-pvt-ltd.sqlite dashboard --as-of 2024-04-30 --excel

```

ssdv firm lists every posted vault under data\ (revenue, AR 90+, cash, quality score, reviewed). It writes data\firm.html. Company count follows the license company_limit (CA Pack 5 / 20 / 50). This is **not** group consolidation.

ssdv review --as-of is the CLI equivalent of **Mark books reviewed for this as-of**. It writes .review.json beside the database.

8.7 Tests

```

cd D:\SSDV
.\.venv\Scripts\python.exe -m pytest tests -q

```

9. Glossary (what you see on the screen)

Term	Meaning
COGS	Cost of goods sold — cost of stock that was sold.
Opex / operating expenses	Running costs: salaries, rent, electricity, bank charges, depreciation. Not COGS.
YTD profit (sales – COGS – operating expenses)	Trading profit for the year to the as-of date from those flows. Not “cash in the bank”.
DSO	Days sales outstanding. How long customers take to pay. AR ÷ FY sales × days . Policy: within 120 days.
DIO	Days inventory outstanding. How long stock sits. Inventory ÷ FY COGS × days .
DPO	Days payable outstanding. How long you take to pay vendors. AP ÷ FY purchases × days .

Cash conversion cycle	**DSO + DIO – DPO** . Days **your** cash is tied up. Shorter is better.
Current ratio	Current assets ÷ current liabilities (term loan excluded).
Quick ratio	(Cash + AR) ÷ current liabilities.
Last-month net cash	Last month receipts – last month payments. Negative is a cash drain, not an opex guess.
Cash forecast (30 / 60 / 90)	Starting cash plus AR 0-30 / 31-60 / 61-90 minus AP in the same buckets. GST net liability and salary payable leave at 30 days. AR 90+ and AR with no invoice aging are not timed. No future sales.
GST net liability	Output GST – input GST from the trial balance (falls back to GST payable if those ledgers are empty).
Benchmarks	Hold / Breach vs SSDV policy bands. Optional peer is **ABC Industrial generated baseline** , not a surveyed industry average.
What-if	Recommend-only levers from posted books (DSO to 120, sales +15% at same margin, collect AR 90+, collections to 80%). Journals are not changed.
Top overdue customers	Ranked by AR 90+ from invoice aging. If there is no 90+ aging (CSV journals without invoice dates), ranked by largest AR balance. Unaged means no invoice date.
Top vendor exposure	Ranked by open AP. AP 90+ uses invoice/bill aging when bills exist.
Collection efficiency	Receipts ÷ sales for the period.
Operating working capital	AR + inventory – AP.
As of	The date of the snapshot. For ABC full books use **31 Mar 2026** . A date <i>*after*</i> year-end (for example 30 Apr 2026) shows an empty new year (sales 0, "revenue decreased 100%").
Quality score	0–100 from validate gates (not AI). Imported vaults without a budget sidecar lose 12 points. PPT needs ≥ 70.
Reviewed	Local lock for this vault + as-of + voucher count. Required (with score ≥ 70) before Board PPT. Stale after a reload.
Sales vs budget	Optional <code>`.budget.yaml`</code> . Variance is actual – budget. Not a full budget model.
All client books	CA Pack roster of local SQLite vaults. Not a group consolidation pack.

10. Files on disk

Path	Role
`data\ssdv.sqlite`	ABC Industrial generated vault
`data\ssdv_connect.sqlite`	Connected / uploaded journals (unnamed connect)
`data\ssdv_*.sqlite`	Named client vault from `--name`
`data\ssdv_ingest.sqlite`	Older ingest sidecar
`data\ssdv_*.sqlite`	Scenario vaults
`data\.review.json`	Review lock for that vault (as-of + voucher count)
`data\.budget.yaml`	Optional sales budget for imported books
`data\mis.html`	Static CEO HTML from `ssdv dashboard`
`data\board-pack.pdf`	Board pack PDF from `ssdv dashboard --pdf`
`data\firm.html`	CA Pack roster from `ssdv firm`
`data\*.xlsx` / `*.pptx`	Excel always; PPT only after review + score ≥ 70
`examples\generic_ingest\`	Sample CSV, map, and `budget.yaml`
`.venv\`	Python environment (not in Git)

SQLite files are **gitignored**. They stay on your PC; they are not on GitHub.

11. Troubleshooting

What you see	What to do
`Streamlit is not installed`	You used global `ssdv`. Run <code>.\.venv\Scripts\ssdv.exe ui ...`</code>
Browser does not open	Leave the CLI window running; open <code>http://localhost:8501</code>
`cannot import name 'kpi_points`	Old Streamlit process. Ctrl+C, start UI again with the venv exe
`as_of cannot be modified after the widget`	Fixed in current code; refresh or restart UI, then use the year-end button
Notes say revenue decreased 100% / profit 0	As-of is after ABC year-end. Use <code>**31 Mar 2026**</code>
Connect / sample numbers on CEO	Vault is `ssdv_connect.sqlite`. Switch to `ssdv.sqlite` for ABC

`Unmapped ledger`	Add that name to the ledger map
`Unbalanced`	Debits $\neq$ credits for that `voucher_id`
Connect vault already has vouchers	Add `--force` or tick **Replace books**
`generic` / `Vouchers` / `Next:` errors in PowerShell	You pasted program output. Ignore it; type only real commands
Unified-Next preflight pytest mismatch	Do not pip-install SSDV or Streamlit into global Python
Edge screenshot is only the window	Download HTML report $\rightarrow$ open file $\rightarrow$ Ctrl+P $\rightarrow$ Save as PDF
`PPT blocked` / no **Download Board PPT**	Quality below 70, or books not reviewed for this as-of. Run `validate`, add a budget sidecar if imported, then **Mark books reviewed** or `ssdv review --as-of`
Quality dropped after Connect	Review sidecar is stale (as-of or voucher count changed). Review again. Missing `.budget.yaml` also deducts 12 on imported books

12. Safety

- SSDV ****never**** posts into Tally, Zoho, Busy, or MitraBooks.
- Do not run `ssdv init --force` on the baseline vault unless you intend to rebuild it.
- Keep SSDV's `.venv` and `D:\sanmitra\_unified-Next\venv` separate.
- OfficeMitra answers only from posted facts. On imported books it must not claim an SSDV "planted" scenario.

13. Command cheat sheet

```
cd D:\SSDV

# ABC Industrial
.\.venv\Scripts\ssdv.exe init
.\.venv\Scripts\ssdv.exe --db data/ssdv.sqlite ui --as-of 2026-03-31

# Sample CSV company
.\.venv\Scripts\ssdv.exe connect --source generic --journals examples/generic_ingest/journals.csv --map exa
.\.venv\Scripts\ssdv.exe --db data/ssdv_connect.sqlite ui --as-of 2024-04-30

# Your export
.\.venv\Scripts\ssdv.exe connect --source generic --journals C:\Exports\journals.csv --map C:\Exports\ledge
.\.venv\Scripts\ssdv.exe --db data/ssdv_connect.sqlite mis --pack ceo --as-of YYYY-MM-DD

# Quality, review, Excel, gated PPT
.\.venv\Scripts\ssdv.exe --db data/ssdv.sqlite validate --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe --db data/ssdv.sqlite review --as-of 2026-03-31
.\.venv\Scripts\ssdv.exe --db data/ssdv.sqlite dashboard --as-of 2026-03-31 --excel --ppt
.\.venv\Scripts\ssdv.exe firm --as-of 2026-03-31
```

Blueprint (locked company rules): [BLUEPRINT.md](#).
